Pick Poker Phase

This is what Player will see after click Pick Poker button

After pick 5 poker card, Player need to click Comfirm Button

Settlement Phase

Player will check Opponent Poker Card

System will calculate the card rank and decide who win in this round.

How To Win

The following table shows the possible hand values in increasing order.

Name	Description	Example
High card	Simple value of the card. Lowest: 2 – Highest: Ace (King in the example)	
Pair	Two cards with the same value	
Two pairs	Two times two cards with the same value	
Three of a kind	Three cards with the same value	

Straight	Sequence of 5 cards in increasing value (Ace can precede 2 or follow up King, but not both), not of the same suit	
Flush	5 cards of the same suit, not in sequential order	
Full house	Combination of three of a kind and a pair	
Four of a kind	Four cards of the same value	
Straight flush	Straight of the same suit	

How To Win

From Low to High is:

- High Card
- Pair
- Two pairs
- Three of a kind
- Straight
- Flush
- Full house
- Four of a kind
- Straight flush

For example:

P1

$$A+A+A+A+2=6$$

6

47

$$A+K+Q+J+10 = 47$$

P2

Because there are no 5 A cards in a deck, we will look at the card pattern at this time.

Player 1 card pattern is “four of a kind”

Player 2 card pattern is “Straight Flush”

So the winner will be P2, because P2 card pattern is higher than P1.

How To Win

- The highest card rank win.
- The Chosen Poker Card Value same as Number Card Value.
- Avoid choosing duplicate poker cards.
- If Player choose duplicate poker cards, Player will lose heart.
- If The Chosen Poker Card Value not same as Number Card Value, Player will lose heart.
- If the Card Rank is same, System will compare the main cards.
If the Main cards also same, System will compare with the kickers.
